

## HOW SUPPLIERS USE WAND MOBILE TO MANAGE KEY ACTION ITEMS

For suppliers, the difference between filling an open requisition and losing the business to a competitor can be mere minutes, if not seconds. Yet historically, there hasn't been a supplier mobile app in the industry that enables key stakeholders to efficiently perform critical tasks on the go.

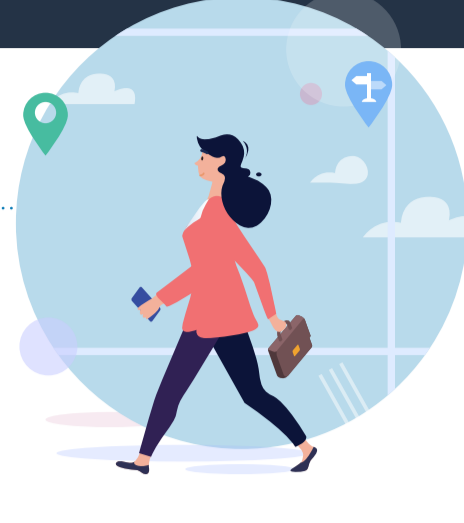

PRO Unlimited has rewritten this paradigm with the introduction of the Wand Mobile Supplier App, the first native app designed specifically for account managers, recruiters and billing specialists. With Wand Mobile, suppliers can respond to new requests faster than ever, while clients receive the benefit of their job openings being filled more quickly with the best available talent.

Here's a visual walk-through of how the Wand Mobile Supplier App makes it easy for suppliers to perform key tasks throughout the worker lifecycle.

supplier

### 1 Meet Amanda Johnson (Recruiter)

Amanda is a recruiter for Acme Co. who uses the Wand Vendor Management System (VMS) every day at work. Like most recruitment managers today, she's frequently away from her desk – but almost always within arm's reach of her mobile phone. Today, she's traveling for a client meeting.

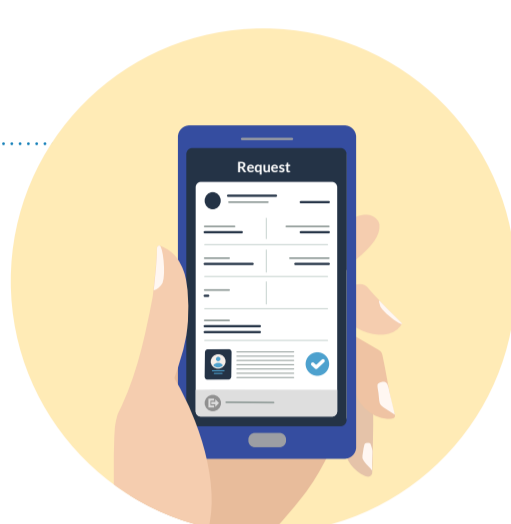

### 2 Amanda Receives a Job Request

While she's awaiting transportation to her destination, Amanda receives a push notification on her mobile device alerting her to a new job request from one of her top clients for a project manager opening.

### 3 She Reviews the Request

Prior to departing for her meeting, Amanda opens the Wand Mobile Supplier App and is able to quickly view all the key request details and requirements within seconds.

### 4 She Forwards It to Team Members

With a single tap, Amanda forwards the request info to her team members at Acme Co. via email, enabling them to immediately begin sourcing the position.

### 5 Amanda Submits a Candidate

A candidate who would be perfect for the job immediately comes to Amanda's mind, so while her team members are working on filling the request, Amanda decides to quickly submit this in-demand candidate. Using the app, she easily searches for and selects his profile, enters a few request-related details and clicks submit – all before leaving for her meeting.

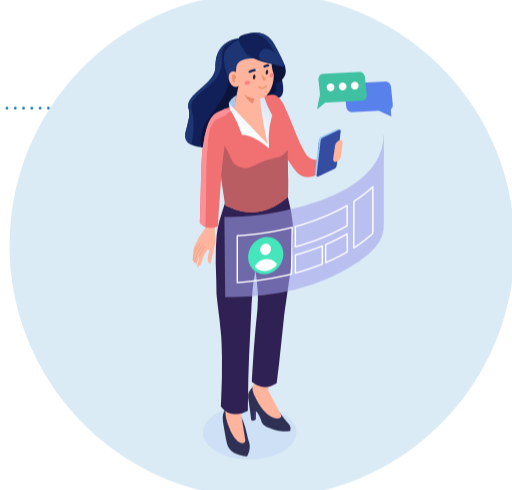

### 6 The Hiring Manager Reviews the Candidate

At the client office, the hiring manager is excited when she promptly begins receiving candidates via Wand. She reviews the candidates and sends some proposed interview times back to a few select suppliers.

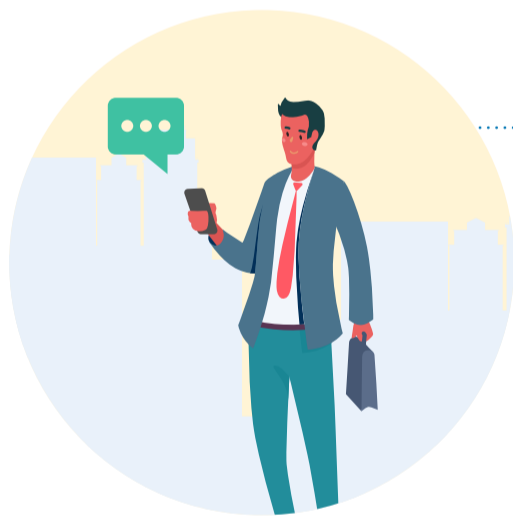

### 7 Amanda Receives a Candidate Interview Request

After arriving at her off-site meeting later that day, Amanda receives a push notification indicating an interview request and proposed time slots for the candidate she submitted earlier. Instead of having to wait until she gets back to her desk, she can accept on the candidate's behalf, propose new interview time slots if needed, or send the interview time options to the candidate via email or SMS text. In this case, she chooses the latter option.

### 8 Meet James Wilson (Candidate)

James is the experienced project manager whom Amanda submitted for the job opening earlier in the day. Within seconds of Amanda sending him the interview time options, James receives an SMS text message on his mobile device.

### 9 The Candidate Responds

Without having to log in to Wand, James reviews the proposed time slots and selects one that works for him. A notification is sent to both Amanda and the client, and the interview is automatically added to the client manager's MS Office or Gmail calendar via Wand's calendar sync integration.

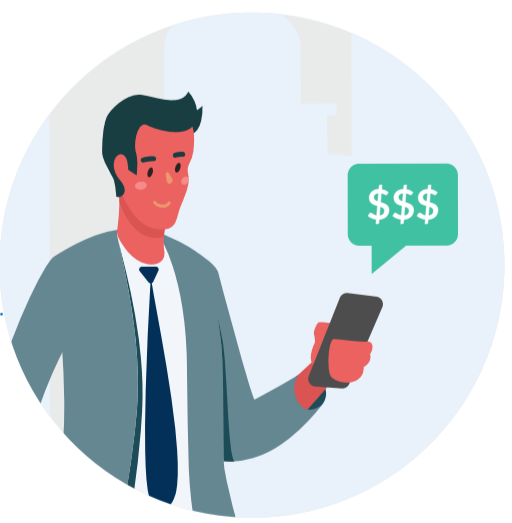

### 10 The Candidate Is Hired

The client interviews James, agrees with Amanda that he's perfect for the position, and hires him for the job.

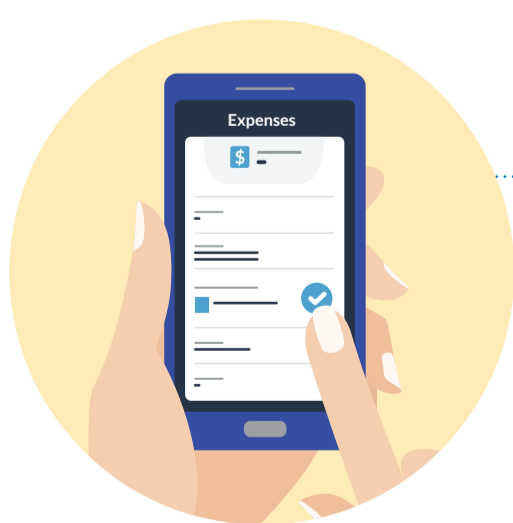

### 11 The Candidate Submits Expenses Through Wand Mobile

After the engagement begins, James submits his time and expenses via the Wand Mobile app for workers. These expenses are reviewed and confirmed by the supplier prior to being routed to the hiring manager.

### 12 Amanda Confirms the Expenses

Amanda receives a push notification on her mobile device that she has expenses to confirm. She reviews the expense in the mobile app and is able to confirm James' submittal, which is then immediately routed to the hiring manager.

### 13 The Manager Provides Final Approval

While at her desk, the hiring manager receives the approval request for the expense and signs off, ensuring James will be reimbursed in a timely fashion.

## USING MOBILE TO ACT FASTER AND ACCOMPLISH MORE

Leveraging the Wand Mobile Supplier App, account managers, recruiters and billing specialists can view new requisitions, submit candidates to requests, schedule and manage candidate interviews, and review and confirm expenses from anywhere. To download the app, visit the [Apple App Store](#) or the [Google Play Store](#).
