

## Challenges

IT organizations are taking a strategic approach to security and need to consolidate security portfolios to reduce complexity. To improve protection they need to integrate IT assets to streamline processes.

## Integration

Our integration with McAfee ePolicy Orchestrator helps to achieve greater efficiency in managing network security and improve protection of critical business assets.

## Integration Benefits

- **Automatic grouping of devices** managed in McAfee ePolicy Orchestrator within ExtremeControl improves visibility and operational processes
- **Automatically augments** ExtremeControl's database with detailed device information from McAfee like the DAT version, device name, operating system and more
- Use **OneView as a single pane of glass** to get deep insights into end-system data
- End-systems can be quarantined when they have an out-dated DAT version
- Auto-update clients: force ePO agents to update their signature

# McAfee ePolicy Orchestrator and Extreme Management Center Integration Overview

## Enhance Security for Devices Accessing Your Network to Protect Sensitive Data

The integration of the McAfee ePolicy Orchestrator (ePO) with ExtremeControl™, part of our Extreme Management Center solution, enhances the security of device access. Using posture assessment, the integration ensures that only compliant devices with an updated anti-virus signature database are able to access the network and its resources. Devices that are out-of-date can be forced to update their signature database automatically or they can be quarantined in case of non-compliance.

While ExtremeControl offers granular control over who and what gains access to your network, the McAfee ePolicy Orchestrator automatically augments ExtremeControl's database with detailed device information such as the DAT version, device name, and the operating system. Staff can use OneView as a single pane of glass to get deep insights into end-system data. This solution enhances security for devices accessing your network.
