

Benefits

- Leverage existing Extreme network infrastructure for video security
- Always available video security solution
- Massive scaling of video streams

Integrations

- Panasonic security cameras
- Extreme Network infrastructure

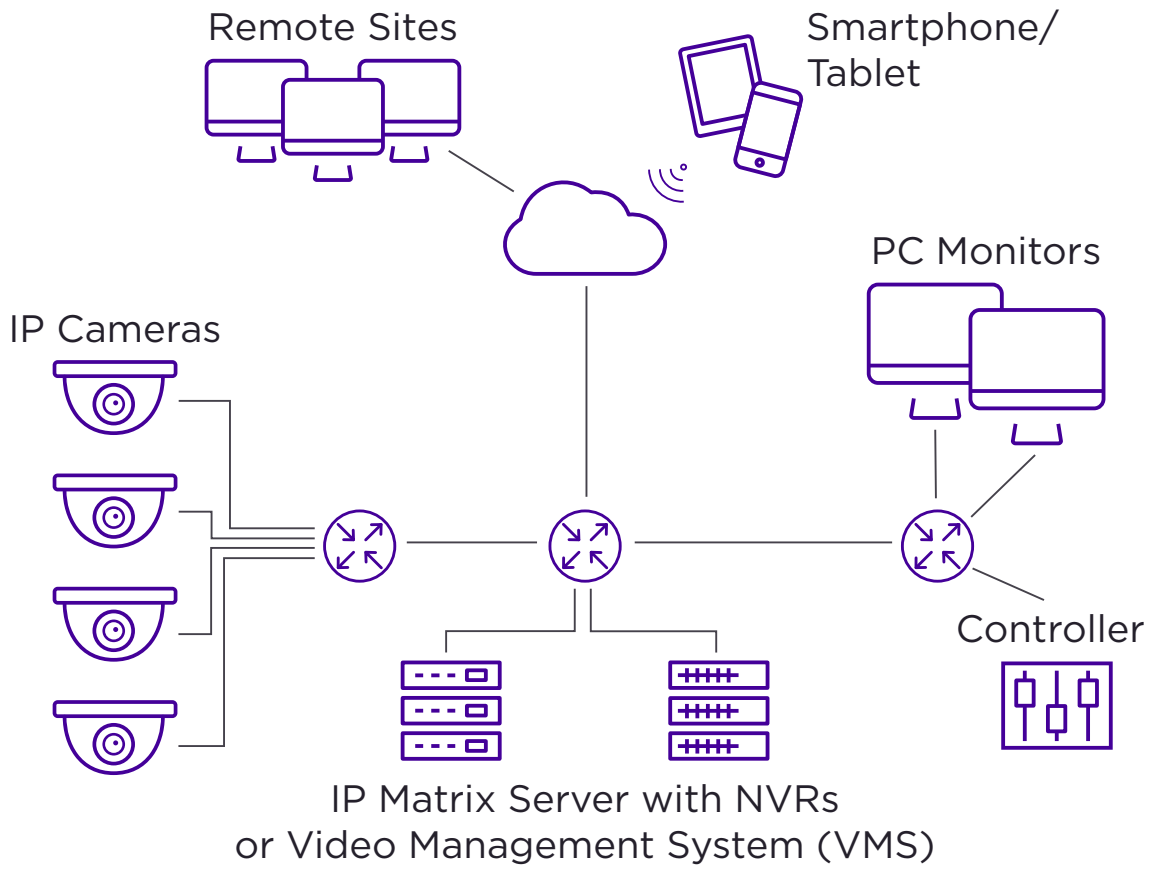

Scalable, Always-On Video Surveillance

Extreme Networks Integrates With Panasonic Security Cameras

The use of video for safety and security is rapidly growing in public spaces as well as large organizations. While video surveillance monitoring has traditionally been limited to security operations centers, the ability to use IP networks opens up a myriad of challenges and opportunities for accessing live and recorded video.

Extreme Networks has partnered with Panasonic to enable the automatic capture of evidence at the highest quality under dynamic and challenging surveillance environments. Panasonic provides a wide range of solutions in order to maintain high-level surveillance capability regardless of the installation site, weather condition, or purposes. The tight integration of the Panasonic security cameras with the Extreme Network solution allows for massive scaling of video streaming and a reliable, always available video security solution.

Extreme Fabric technology solution provides unmatched scalability, flexibility, and ease of deployment for IP based video surveillance solutions. Our fabric technology creates an agile, reliable, virtualized network where you can deploy services at the edge. It let's your applications run 31x faster due to the ability to automate many of today's manual network processes. Fabric technology streamlines and simplifies your network – significantly reducing the number of protocols as well as the number of touch points. The result is a stable, resilient network for video security.
