

SurfClean™

ChemTreat's SurfClean™ is a patent-pending, dual-purpose halogen stabilizer and biodispersant.

As a halogen stabilizer, this product works by creating a chlorine "reservoir" and converts a portion of free residual to a stable, total residual.

As a biodispersant, SurfClean™ has surfactant qualities designed to remove and disperse biofilms, increasing the exposed surface area and, thus, increasing overall efficacy.

ChemTreat cannot guarantee results.

Why SurfClean™?

SurfClean™ provides the following benefits over a bleach or bleach/bromine-only program:

- More effective at maintaining clean surfaces throughout cooling water systems
- Total halogen feed reduction as a result of increased stability and dispersancy
- Reduces chemical additive degradation (polymers, azoles, and scale inhibitors)
- Reduces steel and copper corrosion rates
- Reduces chloride contribution
- Reduces production of harmful byproducts, including THMs and AOXs

Statements are in comparison to bleach or bleach/bromine-only program. Results may vary.
