

## HOW MOBILE IS IMPACTING CONTINGENT WORKFORCE MANAGEMENT

Workers today are on the go, and key tasks often demand attention before they're back at a desk. As a result, the mobile workforce is using smartphones, tablets and even smartwatches to answer emails, check appointments, read notifications, interact with apps and tackle a variety of work-related items.

This mobile productivity is particular critical in contingent workforce management, where faster decision-making and execution can make the difference between whether or not an organization hires the best contingent worker or keeps a critical project on track.

To better understand mobile's impact on the contingent labor management space, PRO Unlimited examined millions of data points from across its global client base. **Here's a visual look at how use of PRO's leading-edge Wand Mobile Vendor Management System (VMS) app is evolving and driving considerable gains in efficiency.**
