

# We're redefining backup and recovery for IBM iSeries AS/400.

## Are you ready?

With Commvault, protecting AS/400 is as easy as backing up to Azure.

Protecting AS/400 (iSeries) can be frustrating and expensive, to say the least. However, it doesn't have to be. Commvault redefines AS/400 protection by seamlessly backing it up — and everything in your data environment — to Azure.

### Our solution:

- **Eliminates expensive mainframe backup hardware.**  
Commvault management and protection of IBM AS/400 data is straightforward and simple. No third-party tools needed mean no need for proprietary solutions.
- **Seamlessly uses Azure as your backup target.**  
We solve your IBM AS/400 protection by using Azure as your backup target. Eliminate costly mainframe backup solutions and improve your availability & scalability.
- **Manages, protects, & enables bare-metal recovery.**  
Commvault covers your IBM AS/400 and your heterogeneous data as easily as we cover any other data — bare-metal restores save time and reduce costs, allowing you to get your data back fast.

### Why trust us?

**Commvault and Microsoft have been partners for 20+ years.** We rely on each other's technology.

**Commvault is built and optimized on Microsoft technology.** We're built to work together.

**Commvault has supported Azure since 2008.** We have experience to count on, especially when it comes to mission-critical data.

**Commvault is used extensively by Microsoft.** We protect some of Microsoft's most-demanding data environments — and we can protect your AS/400 data too!

### Ready to get started? Let's talk.

Talk with your Commvault team and partner to see just how easy it is to rid yourself of your existing, expensive AS/400 backup process by leveraging the power of Azure + Commvault.

It's time to harness the power of Azure with Commvault.
