COMMVAULT®

Endpoint Data Protection as-a-Service

DATA PROTECTION, SECURITY AND VISIBILITY WITH SELF-SERVICE PRODUCTIVITY

REDUCE YOUR RISK, PROTECT YOUR DATA

Historically, protecting data on desktops, laptops, tablets and other devices at the "edge" of your computing network has been outside the scope of IT. But the expansion of the mobile workforce has resulted in a substantial amount of corporate data residing outside the network — outside of your control. In addition, many legacy products often had performance issues, which limited endpoint backup adoption, driving many end users to services like Dropbox and Google Drive.

Without adequate endpoint data protection, your organization has to rely solely on end users to back up their devices – which could put your entire business at risk. Meeting search, compliance and eDiscovery obligations, responding to malware/ransomware threats, and the inherent risk of keeping sensitive data in unsecured clouds has greatly elevated the need for endpoint data protection and secure file sharing.

Regain control of your data, standardize your data protection, access, and risk mitigation with Commvault. Commvault provides a cloud-hosted solution to meet your business needs with no hardware to purchase, configure or maintain. Plus, there's no additional technical resources to worry about since Commvault takes care of the deployment, performance tuning, upgrades, backups and downtime.

PROTECTION
Silent backup of laptop & desktop data without impacting user productivity

SECURITY
Secure laptop data with encryption, secure erase, geo-location and remote wipe functions

VISIBILITY
Anytime search of all your laptop data from a single virtualized storage location

FILE SHARING
Policy-based, auditable secure sharing of information inside and outside of your organization

MOBILE ACCESS
Real-time access to backup and file share data from mobile devices or any browser

Enable your users with endpoint data protection that increases data security, visibility and self-service productivity through a Commvault as-a-Service offering.
