## ▶ VENDOR-INDEPENDENT APPROACH

Commvault has approved reference architectures for Cisco, NetApp, Nutanix, Pure, Hitachi, and Infinidat — and in every case, the architecture creates efficiencies and tool sets that the OEM's do not have on their own, creating value for hospitals that wish to pursue a converged or hyper-converged infrastructure.

▶ By consolidating backup, archiving and recovery, Commvault improves your business operations — eliminating the need for multiple point products while providing a more efficient, cost-effective approach to data management.

## ▶ WHAT SETS US APART

### A TRUE SINGLE PLATFORM TO MANAGE ALL OF YOUR DATA

Unlike many other solutions available today, Commvault can protect all of your data without a patchwork of supporting systems. The result? Simpler data management, better support, and lower costs.

### PERFORMANCE

Commvault technology is efficient — which means less required storage space and more accessible backup data.

### OPEN, STANDARDS-BASED PLATFORM

Commvault supports an open data management standards approach and can scale to address your entire healthcare organization — no matter how large it is or how much it grows.

### SECURITY

Commvault offers features like encryption, access controls, and data integrity controls to help you protect your data against cybersecurity threats like ransomware.
