

# ChemTreat Paste Series Products

## Why Use Solids?

ChemTreat solid products supply proven water treatment chemistries to cooling water, closed loops, and boilers. These concentrated paste products are much smaller and lighter than our liquid products, reducing transportation and storage costs while providing the same protection as their liquid counterparts. Talk to your local ChemTreat representative to see how using ChemTreat Paste Series Products can help your facility.

## Paste Series Products have the following advantages over liquid water treatment products:

### Storage Advantages

- No need to triple-rinse bottles
- Smaller containers, reducing plastic use
- Recyclable canisters
- Reduced footprint (feeders are approximately 1' x 3', smaller than drums of liquid chemical)

### Employee Advantages

- Eliminate drum and tote handling
- Smart capabilities for remote monitoring and alerts
- Detection of issues in chemical flow
- Non-contact level control: an ultra-sonic sensor prevents overflow and controls chemical feed rate

### Transportation Advantages

- Low weight allows for reduced shipping costs
- Requires limited storage space
- Alleviate risks associated with moving chemicals for hard-to-reach systems
