Benefits

- Improve patient safety with proactive alerts to caregivers
- Drive efficiency at the point of care
- Facilitate the integration of nurse call into the healthcare enterprise to better connect patients

Integrations

- ExtremeSwitching™
- Hillrom Navicare® Nurse Call

Empowering Care Teams Through Innovation and Actionable Insights

Integration of ExtremeSwitching ERS 4950 Series Switches with Hillrom Navicare Nurse Call System

The Hillrom NaviCare® Nurse Call (NNC) system delivers the next generation of nurse call, a comprehensive information management system that optimizes communications within the nursing unit, to connect patients, caregivers, and care giving technology.

The system enables caregivers to quickly locate and communicate with patients and fellow staff members, while patients can easily communicate with caregivers, the nursing station, or directly to their primary caregiver through a wireless device.

Extreme Networks has integrated the Hillrom NaveCare Nurse call system with the ExtremeSwitching ERS 4950, a next-generation, high-performance Ethernet Switching platform that is built to withstand the highest demands of a healthcare organization.

Rigorous testing and a UL1069 certification of the Hillrom NaviCare Nurse Call system with the ExtremeSwitching ERS 4950 Series facilitates and optimizes the integration of this solution into the healthcare enterprise network and provides a powerful platform for clinical connectivity.
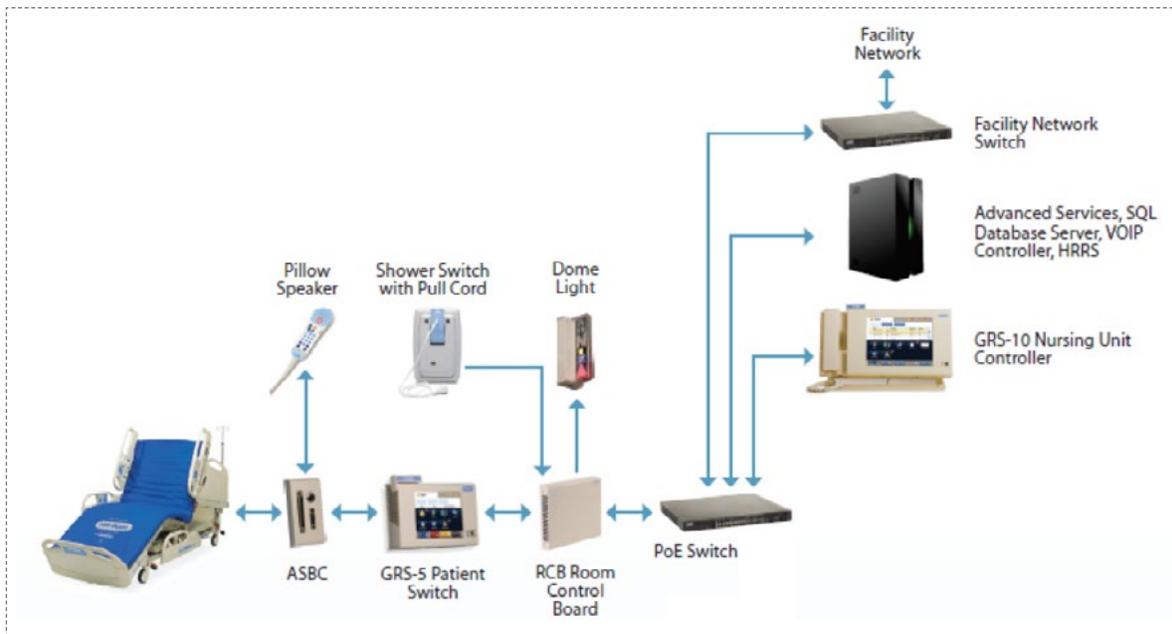

Figure 1: Components of Hillrom NaviCare Architecture

Extreme Networks and HillRom have partnered to deliver a UL1069 certified solution that facilitates the integration of the Hillrom NaviCare Nurse Call system into your healthcare enterprise network. The solution of ExtremeSwitching ERS 4950 devices with the Hillrom Navicare Nurse Call system has been tested and certified at Underwriters Laboratories. Only a few network equipment providers have gone through this rigorous testing process and achived the UL1069 certification, which is the standard for Hospital Signaling and Nurse Call Equipment.

The Extreme ERS 4950 is a next generation, high-performance, feature-rich Ethernet switching platform that is ideal for hospital environments. The ERS 4950 is capable of intelligent stacking at the network edge, Fabric Connect capable, and energy efficient.

Extreme Networks is dedicated to providing the industry's first cloud-driven, end-to-end enterprise network. Our 100% in-sourced support and services are always available with decades of experience working with leading healthcare organizations.
