

► Office 365™ Backup as a Service (O365 BaaS) for Service Providers Datasheet

SOLUTION HIGHLIGHTS

- Cost-effective and reliable modern data protection for Exchange Online, OneDrive for Business and SharePoint Online workloads
- Recover from accidental deletion or corruption of Office 365 data
- Well-defined service plans and extras offer cost predictability and pricing options

OVERVIEW

Microsoft® Office 365 is one of the fastest adopted suites of communication and productivity tools in the world, for any sized business. Delivering the power of Exchange, OneDrive for Business and SharePoint Online it enables businesses to create, communicate, and collaborate through a SaaS-based application.

However, SaaS-based applications such as Office 365 present challenges for consumers. Microsoft's Shared Responsibilities for Cloud Computing¹ outlines ownership of Data Protection and Compliance is the customer's sole responsibility and not provided by the base platform. Liability may be inadequate or offerings not able to meet the customer needs such as: wide ranging RPOs, limited retention options, and addressing multiple use cases. Many are not aware of this gap and its potential effects, nor do they house the technology, features, or IP to address them.

The Office 365 Backup as a Service (O365 BaaS) offering, powered by Commvault, presents an opportunity for Service Providers to cover these gaps and deliver data protection plans that meet the new demands offered by Office 365.

Businesses worldwide trust Commvault to address their unique demands for data protection and information management. Read some of their stories to learn why. Visit commvault.com/case-studies.

KEY BENEFITS

BENEFIT	VALUE
Comprehensive data protection	Office 365 assets are protected and fully recoverable with an industry-leading backup and recovery solution
Reliable data access	Quickly recover from data loss from Office 365 backup copies and other assets regardless of location
Faster Office 365 migration	Shorten the migration cycle by moving only business-critical data, regardless of location target(s)
Reduced migration costs	Archiving inactive or legacy user mailboxes reduces the amount of data being moved to Office 365, result in decreased project costs and increased customer value
Self service capabilities	Free up administration overhead and let your tenants take control
Simplified administration	Efficiently and seamlessly manage your on-premises and Office 365 tenants through a single, integrated Platform
Guarantee compliance and security	Encryption, granular, policy-based controls, all-inclusive data collection and high-speed search and discovery deliver the compliance and security options needed for even the most regulated data and applications

SUMMARY

Commvault's experience in data management delivers top-of-the-class features and functionality required to power and manage an Office 365 BaaS offering at scale, increasing the value proposition and go-to-market power for the Service Provider.

- Commvault helps MSPs get profitable new data protection and data management services running quickly, with a range of services to ensure they have an offer to serve every customer. To learn more about Commvault's Service Provider offerings, visit commvault.com/service-providers.
