

Reporting

Get them the facts, fast.

Turn raw data into insight-packed reports in just a fraction of the time that it takes you now. Forsta makes reporting so slick and simple you can produce reports how you want them, up-to-the-minute, error free and put them into the hands of the people who need them. Fast.

Change up reports fast

If you need to deliver different versions of the same report, or send some key info on-the-fly, you can quickly adapt reports and update information across an entire report with just one click.

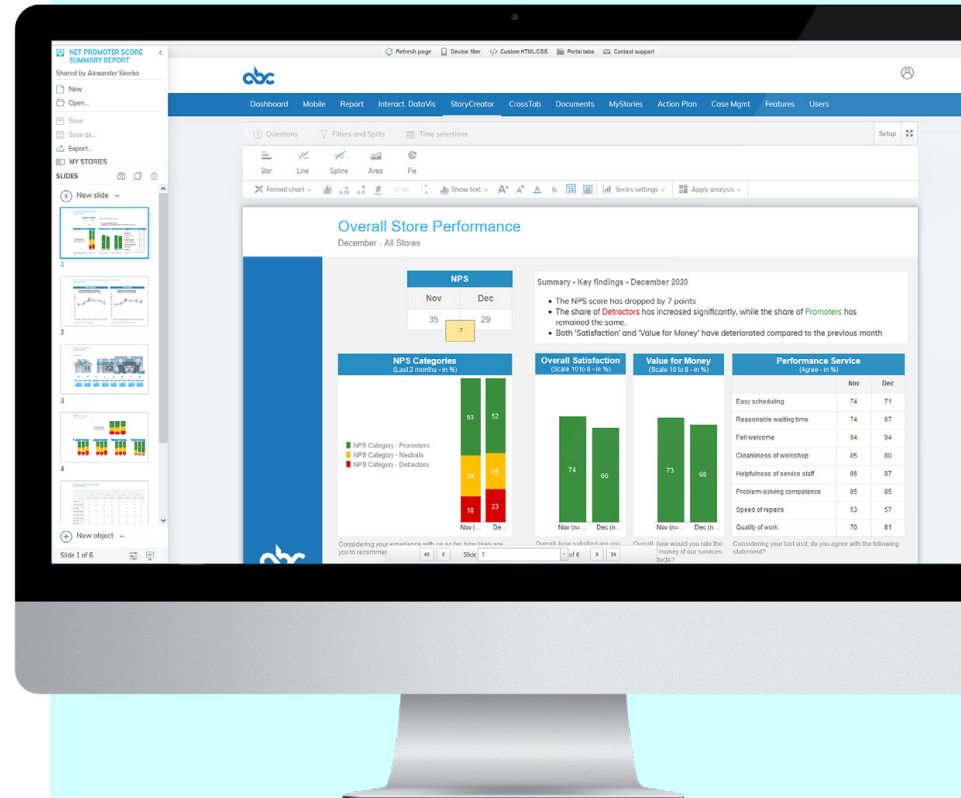

Need a deck? It's done

Our drag-and-drop workspaces allow you to pull data right onto the page and turn it into tables, charts and infographics. Whether you're looking to adapt old reports or work completely from

scratch, you can deliver straight to the people who need them and export decks direct to PowerPoint, PDF and Excel.

All formats welcome

Import survey data in almost any format, or link directly to your data sources. What does this mean? Well, you can start your reports the minute fieldwork wraps up.

Key features

Deck creation

Easily create comprehensive chart decks to show key findings without having create tables first.

Cross tabulation

Drag and drop variables, apply filters, choose calculations, apply stat testing and much more.

Storage

Consolidate all your research files into the reporting system and share amongst users.

Data

Import multiple survey data file types and then clean and recode if required. Seamlessly co-mingle non-survey data – like sales, ad spend, social media – to provide context.

Analytics

Apply weighting, stat testing, net creation, computing variables and so much more with built in features to automate common analytical tasks.

Sharing

Export decks and share with the ability to add extensive user access controls and management.

Template library

Create your own library of objects, slides or reports for faster setup of reports eliminating the need to start from scratch.

Batch reporting

Generate PowerPoint decks with different data configurations. For example, same deck by country, product etc. And can be programmed to run while user is offline.
